Productiveness of Mimouri Soil.
Columnta, Mo., Dec. 23.—The productiveness of the soil of any State is shown by the average crop yields for a series of years, rather than by the total output of the state. That the soil in Missouri is more productive growing states is clearly demonstrated by the official reports of the United which shows the average production of corn in Missouri during the last four years has been greater than that of any other of the great corn growing states except Illinois. The United

produced.

While this official statement shows that Missouri soil and Missouri farmers are equal if not superior to those of other states it also shows that the limit of conduction of core and other. of other states it also shows that the must be brought back to the penite limit of production of corn and other tlary. He was under a ten-year se Missouri. Many farmers have made an average yield during the four years mentioned of from 40 to 80 bu drinking and gambling for the next per acre, and there is no reason why the average yield for the entire State of Missouri should not be increased to at least 40 bushels per acre, if our farmers will apply well established scientific [methods in selecting seed and in cultivation, and the use and in cultivation, and the use of prope

and in two weeks she found her health in a serious condition.

Fortunately, Peruna had been broughs to her notice, and she took a course of this remedy before it was too late.

In a week the cough and cold were broken, and a three weeks' treatment completely restored her to health.

This is what Peruna is doing all the while. Not a day, and probably not an hour passes in which some one does not have a similar experience with Peruna.

Cure the Slight Colds and Aveld Consumption.

The first step toward consumption is a cold. The next step is a failure to care it promptly. The third step is the development of entarth, which gradually becomes chronic. The fourth step, the catarrh begins to spread from the head to the throat, then to the bronchial tubes, and finally into the lungs. It is then consumption in the first clage.

At any time during the progress of estarth, from the first onset of the cold to its final settlement in the lungs, Fornna can be relied upon to stop the disease. If you have taken a cold, buy Peruna without delay. One bottle in the beginning will de more good than a helf dozen bottless after the catarrh has fastened itself on the lungs.

# KEEN KUTTER

The draw knife shown here is an example of the excellence of Keen Kutter Tools. It has a nicety of balance and "hang," which has never been successfully imitated, and it is made of the best state ever put into a draw knife.

Yet the Keen Kutter Draw Knife is no better than all other Keen Kutter Tools.

The Keen Kutter Line was awarded the Grand Prise at the St. Louis Fair, being the only complete line of tools ever to receive a reward at a great exposition.

Buildening are some of the various kinds of Keen Rutter Tools:
